# SmartDrive 360: capturing risk from all angles

Most video-based safety systems provide a road-facing camera to capture what's happening in front of a vehicle and some include an interior-facing camera to capture what's happening inside the vehicle.

SmartDrive takes video-based safety to the next level. In addition to having both road-facing and interior-facing cameras, you have the option to deploy additional cameras - enabling a 360-degree view of the vehicle and insight to the riskiest related driving performance, such as U-turns, reversing, unsafe lane changes, unsafe merging and close following – delivering an unprecedented level of coverage and complete visibility to risk.

These extra eyes on the road, and around the vehicle, provide additional context for driving-related situations and ensure compliance for work being done outside the vehicle.

## 360-degree video insight

With 35% of collisions being side and rear incidents, the enhanced visibility down the sides of the vehicle and trailer provides insight to the situations drivers face every day – ensuring maximum protection of drivers and fleet assets. For those fleets facing mystery damage or theft, additional cameras provide added protection when and where you need it most.

**“Our drivers recognised, early on, that more cameras equal more protection. While I know many fleets are concerned about driver reaction to video, our drivers not only loved SmartDrive’s programme when we had interior and road-facing cameras, they asked for more video when given the opportunity.”**

# Smarter fleets, safer fleets

## Automatic triggers, automatic downloads

SmartDrive 360 is an optional service that enhances your visibility into driving-related incidents, risk and compliance violations by automatically providing you with video from additional cameras. When a vehicle with SmartDrive 360 performs a risky manoeuvre, video from up to nine cameras can be captured and automatically off-loaded from the event recorder – making that video available in line with the standard SmartDrive safety service.

With SmartDrive 360, fleets have near-instant access to video, providing quicker insight and more information, so they can resolve issues quickly and keep their driver and vehicle protected – and on the road.

## Enhanced safety through Extended Recording

Video-based safety systems do a great job of telling you what happened when a high-impact event occurs. But, they don't always capture everything. That's when SmartDrive Extended Recording can help.

In addition to ensuring that you never miss a driving incident, Extended Recording ensures fleets gain additional pre and post insights to incidents and collisions. With solid state drive technology to provide longer life, Extended Recording provides fleets with significant savings through additional exonerations, resolving mystery-related damages, better-supported claims investigations and improved adherence to non-driving operations.

Get the complete coverage your drivers deserve. Get SmartDrive 360 with Extended Recording.
